AB - JP2002017848 NOVELTY - A microparticle is obtained by forming an
oil/water emulsion. The emulsion is formed by mixing an oil phase
containing an in-vivo biodegradable and absorbable hydrophobic high
molecular compound dissolved in solvent and water phase containing
surfactant in polyvinyl alcohol aqueous solution. The solvent is
removed from emulsion.
- DETAILED DESCRIPTION - A microparticle is obtained by forming an
oil/water emulsion. The emulsion is formed by mixing an oil phase
containing an in-vivo biodegradable and absorbable hydrophobic high

molecular compound (1-50 wt.%) dissolved in solvent and water phase containing surfactant (0.01-10 wt.%) in polyvinyl alcohol aqueous solution. The solvent is removed from emulsion. The size of the microparticle is 50-500 μ m.

- An INDEPENDENT CLAIM is also included for an injection agent containing the microparticle for improving urinary incontinence or vesicoureteral reflux disease and for flexible tissue increase.
- ACTIVITY - Uropathic. No test details are given in the specification.
- MECHANISM OF ACTION - None given.
- USE - For treating urinary incontinence or vesicoureteral reflux disease (claimed) by increasing flexibility in tissue.
- ADVANTAGE - The microparticle contains in vivo biodegradable and absorbable polymeric material. The microparticle is safe for use as bone repair material. The particles does not produce any allergic or inflammatory reaction when injected into the living body. The particles can be embedded in the living body for a long period of time.
